

Add a New Chart (mobile)

Related Stories

When I'm setting up Observations Suite, I add new charts to my dashboard, so it's easy to find the information that's most important to me.

After using Observations Suite for a few months, I update my dashboard with new charts, so I can continue to optimize my business.

Use the built-in OS picker.

Advance to the next screen when the user taps the "Done" button.

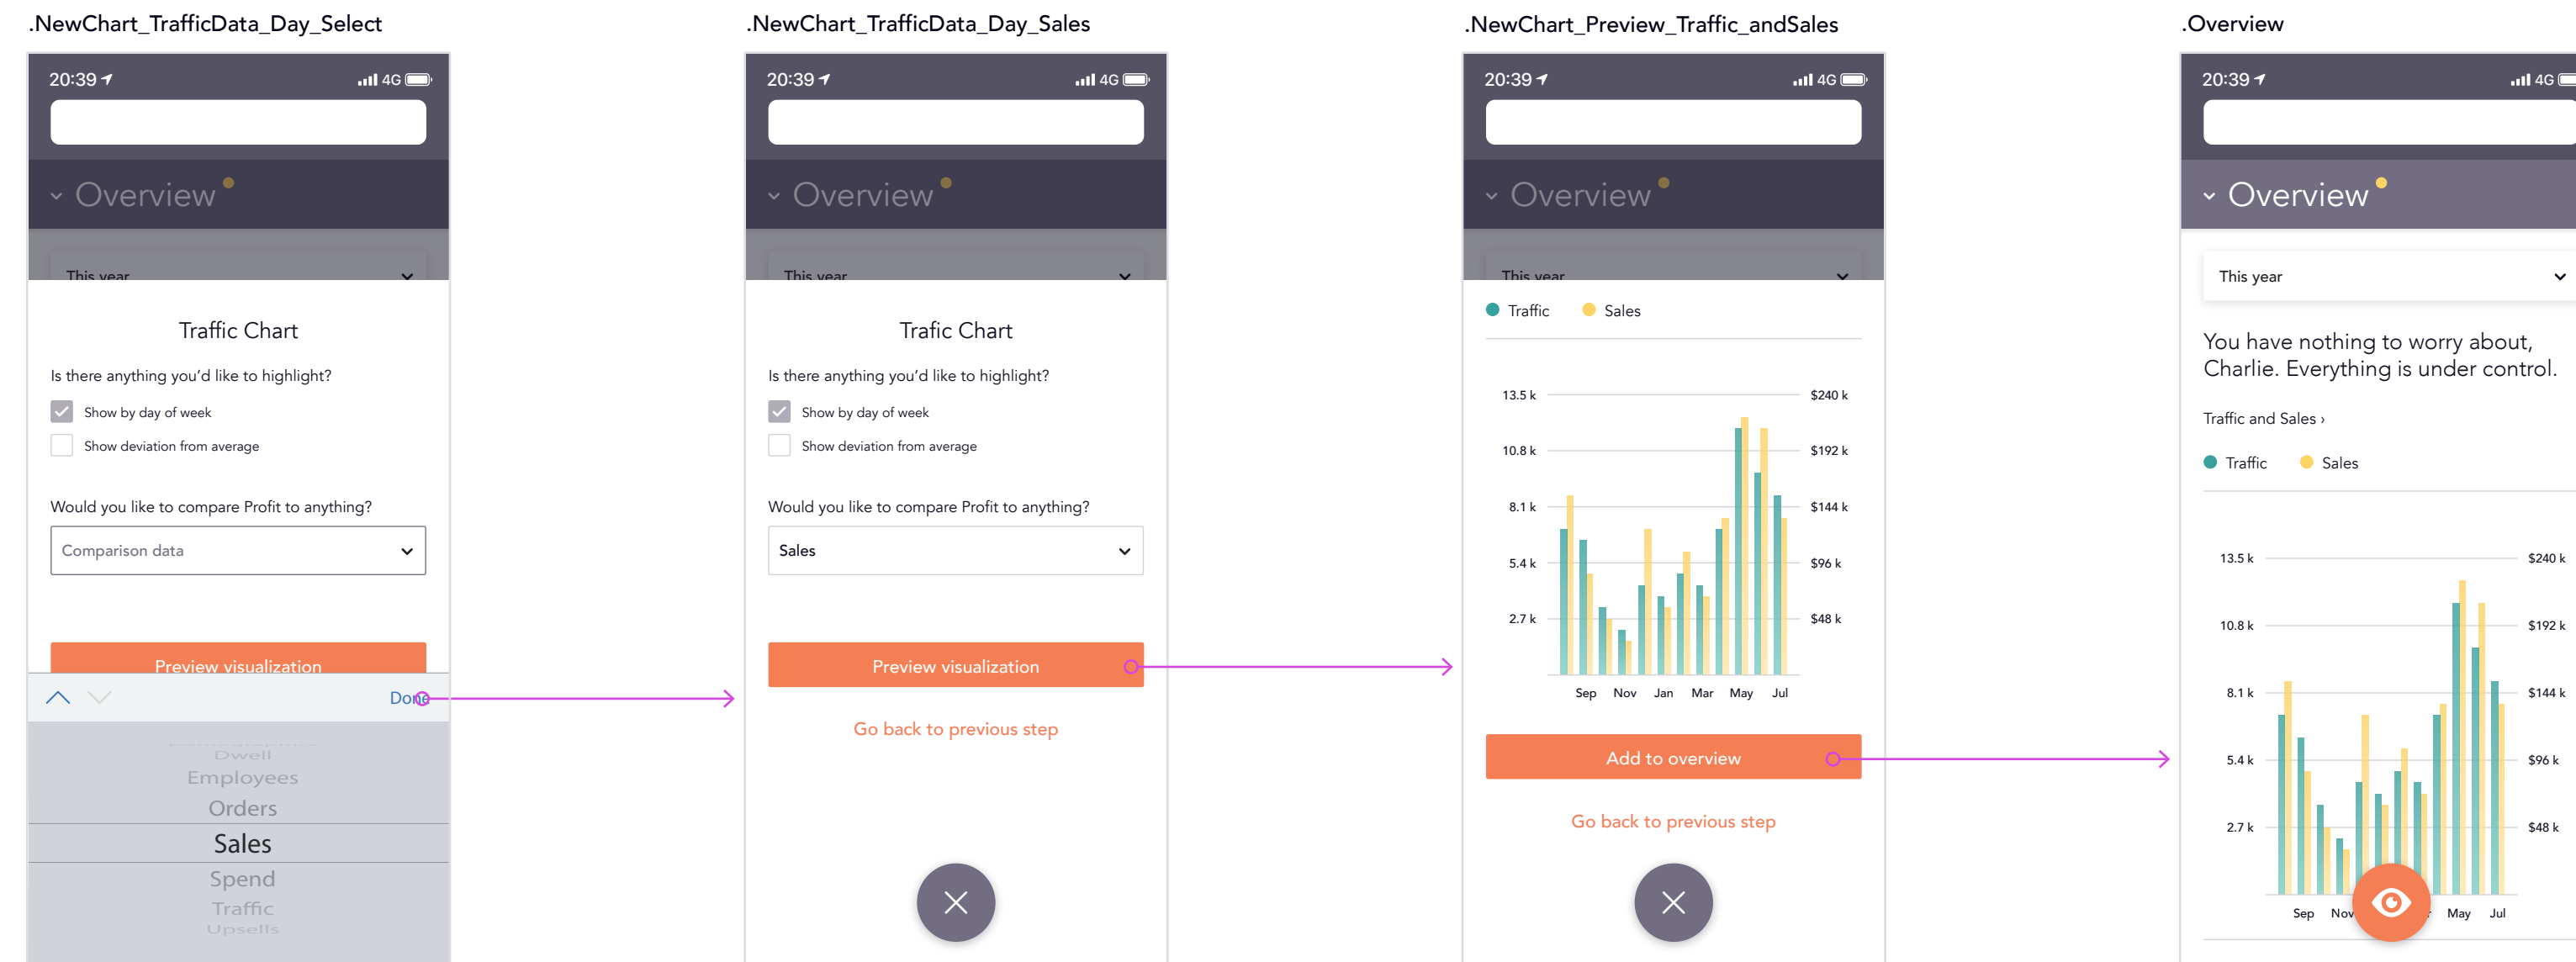

These options will vary depending on the data set selected.

Add a New Chart (mobile)

Related Stories

When I'm setting up Observations Suite, I add new charts to my dashboard, so it's easy to find the information that's most important to me.

After using Observations Suite for a few months, I update my dashboard with new charts, so I can continue to optimize my business.

List should be curated to eliminate options that don't provide any value.

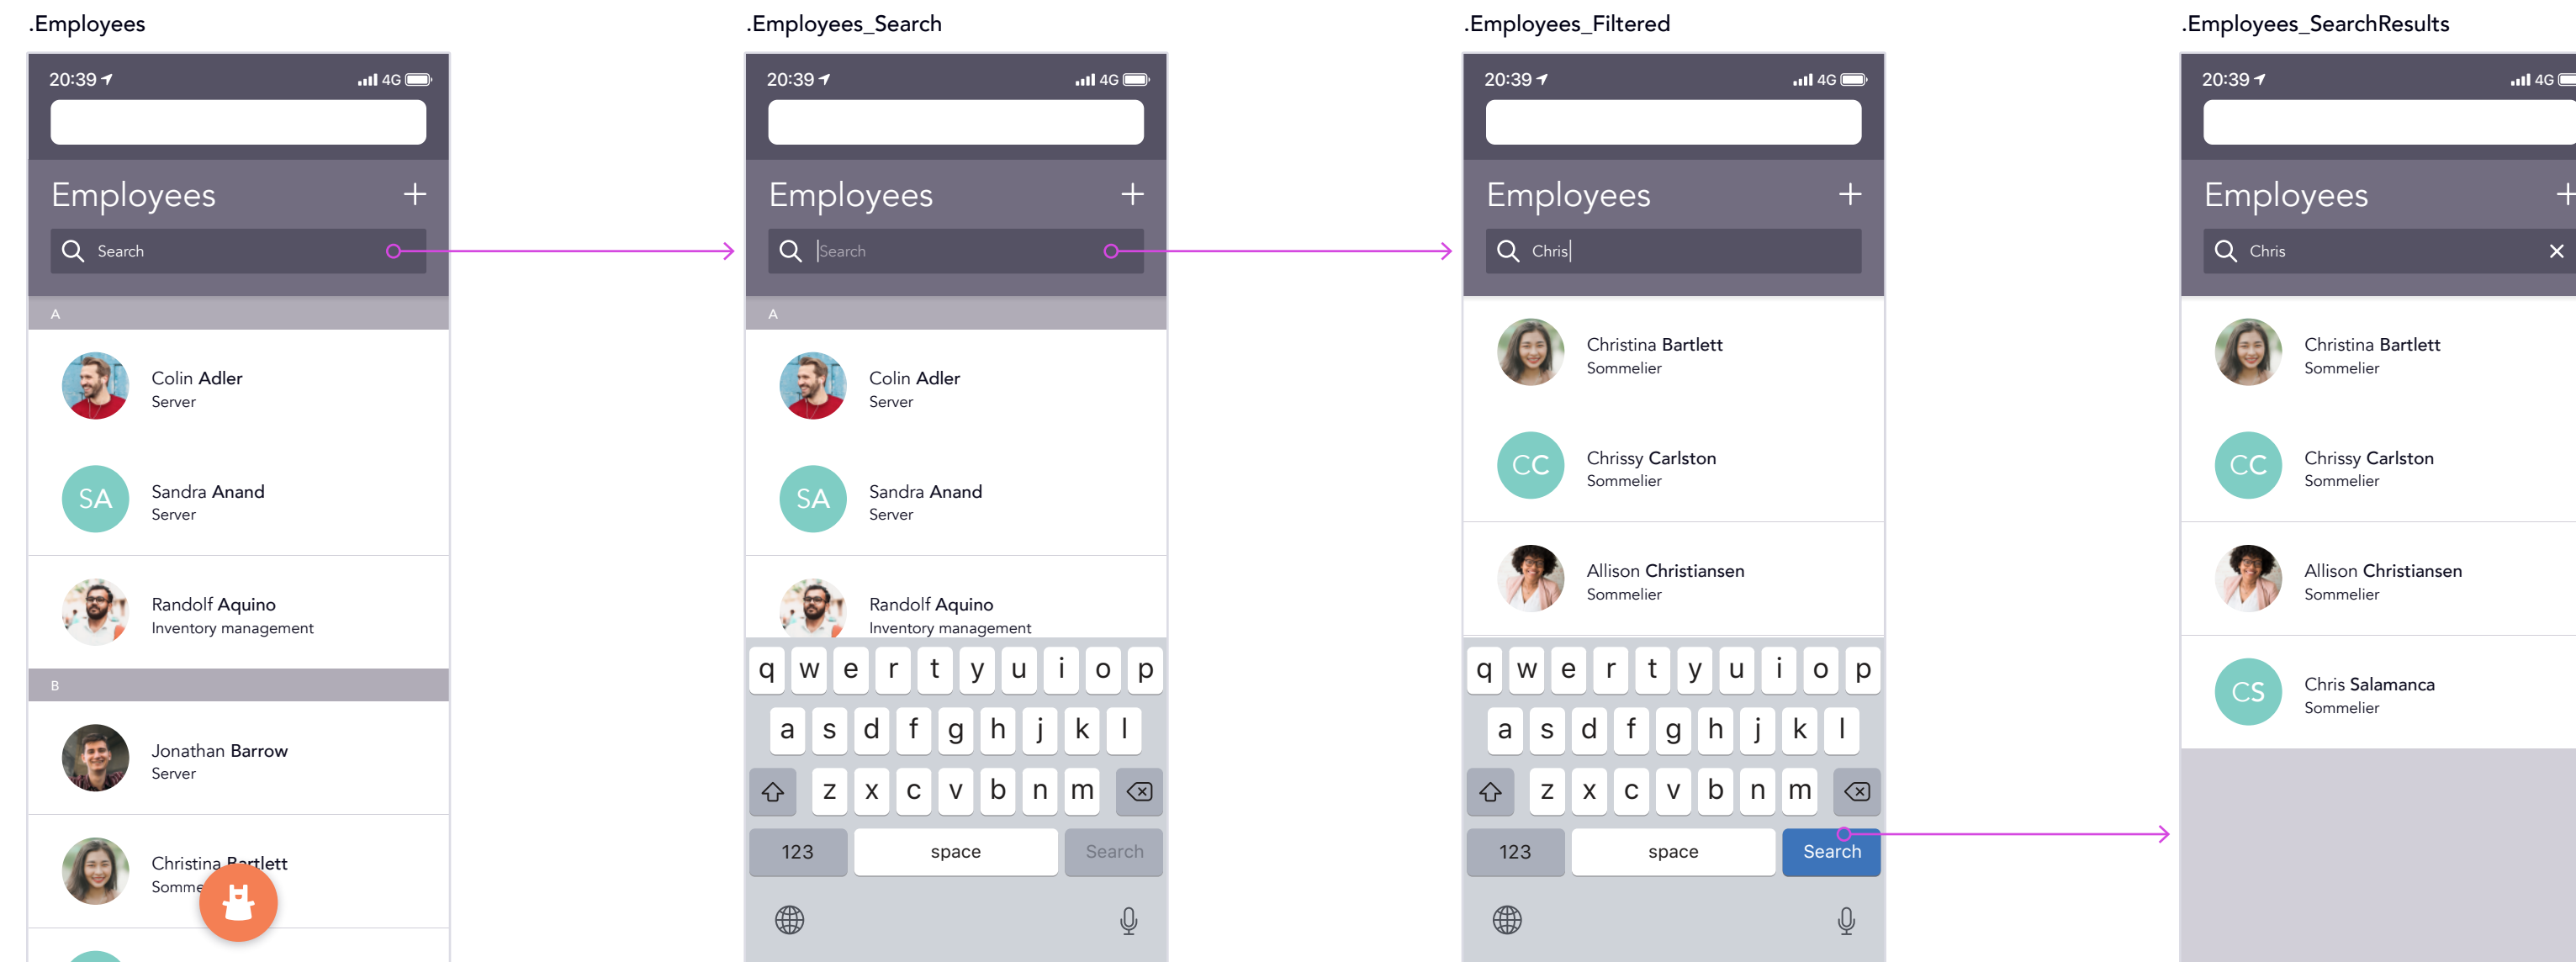

The chart preview should use the time resolution currently selected for the overview.

Employee Search (mobile)

Related Stories

When I need to access an individual employee's information, I search for the person in my directory, so I can find them more quickly.

When I forget an employee's last name, I search using their first name, so that I can find them more efficiently.

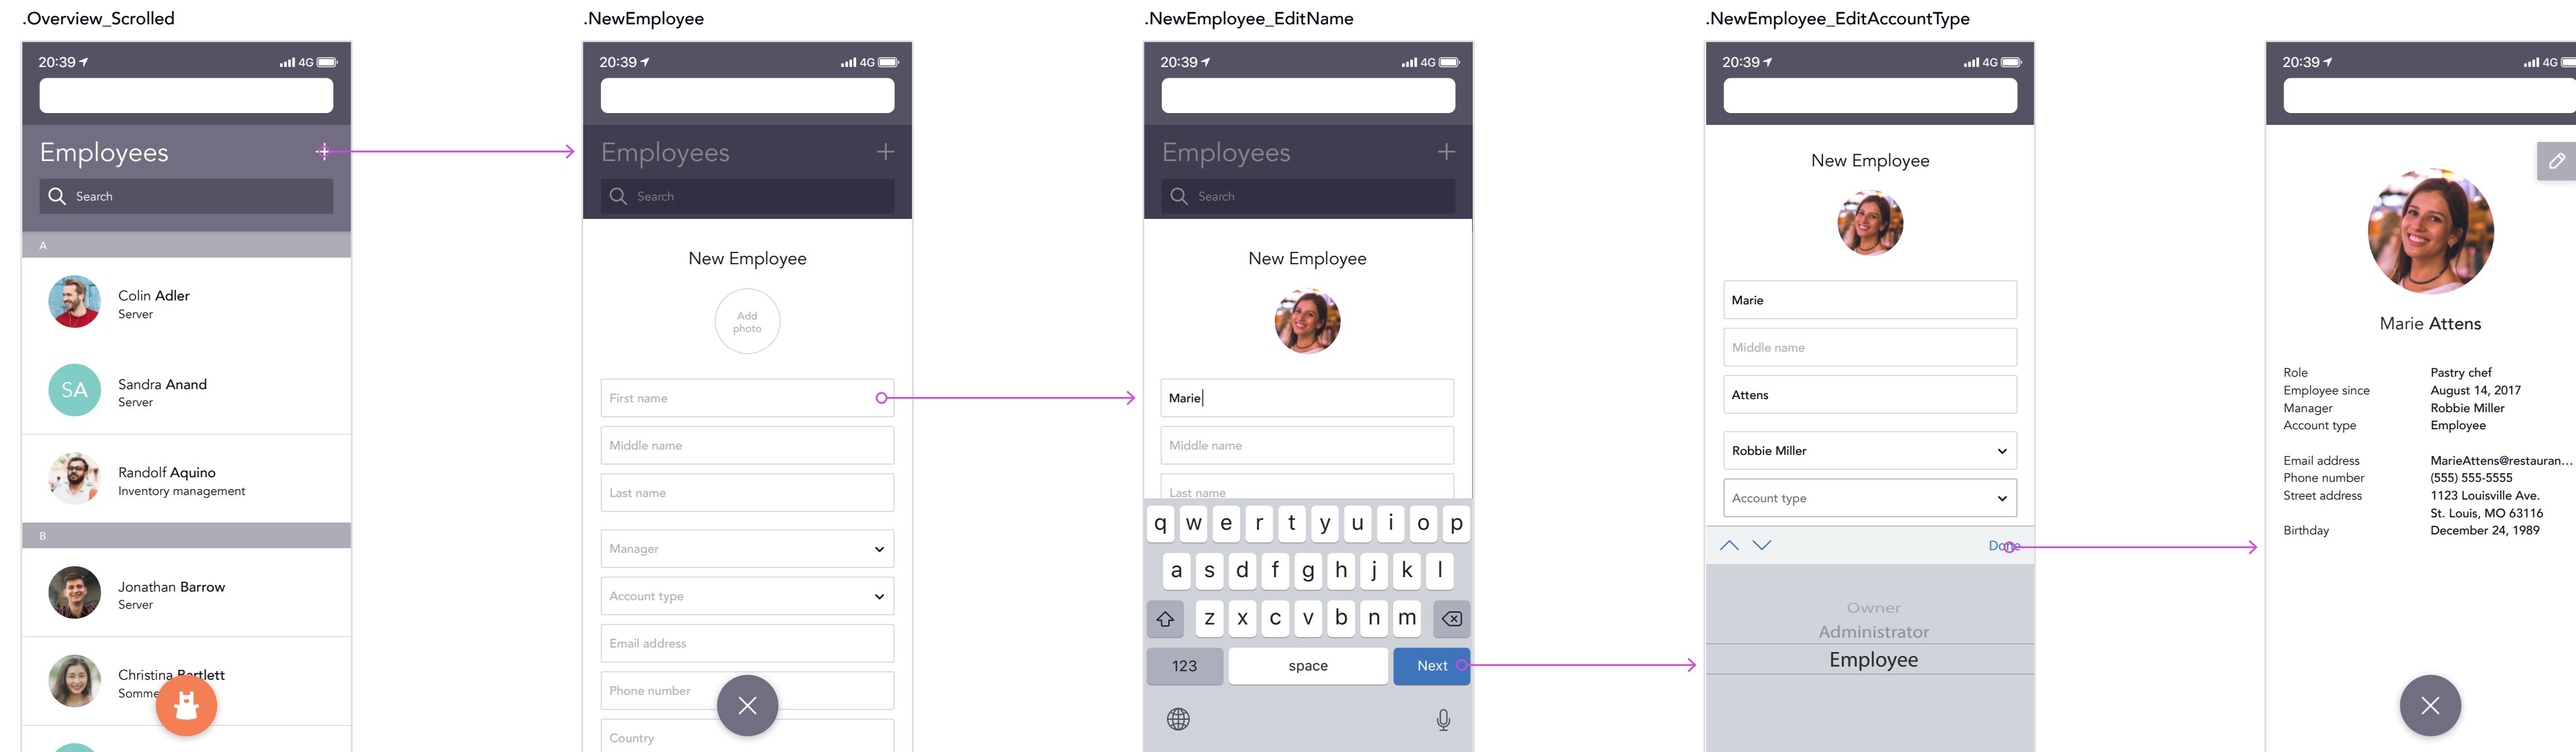

The first letter in the search should be capitalized (the key-board should reflect this).

Results auto-update, filtering based on search input.

Add Employee (mobile)

Related Stories

When I hire a new employee, I enter their information into Observations Suite, so that I can track their performance.

Add photo should use standard OS controls.

Capitalize the first letter of every field.

For error cases, see Employee Errors.
